ABOUT ME

I am an Android Developer with 4+ years of experience building scalable, high-performance mobile applications. Strong ownership of end-to-end development, with expertise in Kotlin, Jetpack, and MVVM architecture. Passionate about clean code and delivering reliable, user-centric solutions

OPEN-SOURCE PROJECTS

Project: Task Manager - A multi-module app that lets users create and track work items across Home, Calendar and Project screens.

- [Project Link](#)
- Built high performance UI using Jetpack compose, **optimizing composition** through effective state management.
- **Architecture** : MVVM
- Implemented **offline-first** functionality using Room for persistent data storage.
- Explored Compose Navigation to gain hands-on experience and to evaluate its impact on app navigation architecture.

PROFESSIONAL SKILLS

- **Languages:** Kotlin , Java
- **Libraries:** Compose, Coroutines, Flow, Retrofit, Android BLE
- **Databases:** RoomDB, Sqlite
- **DI:** Hilt, Koin
- **Multiplatform:** Kotlin Multiplatform (KMP)
- **Testing:** JUnit, Mockito, Unit Testing

EDUCATIONAL BACKGROUND

B.Tech – Computer Science & Engineering
Meerut Institute of Engineering and Technology (AKTU)
2017 – 2021

WORK HISTORY

Motive Technologies (Jan 2024 to Present)

Software Engineer 2

Project: Fleet App - A all-in-one fleet management tool used to track vehicle locations, monitor driver safety and ensure ELD compliance streamlining operations through real-time communication.

- Maintained **Crash Rate at 99.8%** and improved startup time by ~20% via cold start and dependency optimisations.
- Migrated to **Jetpack Compose** and re-architected with **KMP Business Logic** Modules + Clean Architecture
- Built **Bluetooth device** verification flows and introduced KMP modules for shared logic.
- Increased engineering efficiency by enhancing CI/CD pipelines, **automating workflows** and team knowledge sharing.
- Owned app releases, managing phased rollouts, **monitoring crashes/ANR** and delivering timely fixes to ensure stability.

HSBC (Aug 2021 to Dec 2023)

Software Engineer

Project: HSBC Online Banking - A Mobile Banking Application offered by the bank to its customers for a seamless online banking experience.

- Improved UI performance and responsiveness, leading to a smoother user experience across core banking flows.
- Contributed to migration from legacy architecture to MVVM, improving code maintainability and scalability.
- Diagnosed and resolved critical production issues, reducing app instability and improving reliability.
- Collaborated with cross-functional teams to deliver secure and compliant banking features.

Naskay Technologies (Nov 2020 to Aug 2021)

Android Intern

Project: Jillian Michaels | Fitness App

- Redesigned app UI and implemented features using Kotlin, Glide, and Retrofit
- Reduced APK size through code and resource optimisation.
- Improved code quality via refactoring and bug fixes.
