

Sahib Singh

AVP, Mobile. Native iOS, native Android, KMP and Flutter, with production work shipped in all four.

Seven years, four companies, and no single platform to narrow him to. At Keenai Global he's a Builder: features end to end, backend through testing, with AI, in wealth-tech for Indian HNIs, UHNIs and family offices. That matters here more than anything else on this page. The delivery model this studio sells isn't a theory he's trying out on clients. It's how he already works every day, in a regulated domain with real money and real auditors attached.

sahiboffc@gmail.com

Five surfaces, five places. A filled cell means a product we can name.

Keenai Global

2025 - now

Flutter

Keenai Wealth, Keenai Pulse

end to end with AI

Backend, frontend, tests

Motive

2023 - 2025

native iOS

Motive Fleet and Driver apps

native Android

Motive Fleet and Driver apps; Views to Compose

KMP

smallcase

2020 - 2023

native iOS

Tickertape

native Android

smallcase Android app

Flutter

Tickertape Flutter for iOS, Android migrated

Cleartrip

2019 - 2020

native Android

Cleartrip Android app

TheGeekDogs

2020 - now

native Android

Pocket Manager

Keenai Global

2025 - now

Wealth-tech, Singapore and Bengaluru. Built with Lighthouse Canton, for accredited investors and family offices.

Builder (AVP, Mobile)

Keenai Wealth, a multi-asset platform covering 50 global markets with custody at BNY Pershing, and Keenai Pulse, which the firm runs for single-family offices.

Flutter, Dart. And end-to-end feature work, backend through testing, with AI.

Motive

2023 – 2025

Fleet management, US. Formerly KeepTruckin. AI dashcams, ELD compliance, telematics.

Android Engineer

Motive Fleet App, fleet-manager side: GPS, hours of service, vehicle health, dashcam review.

Native Android, native iOS, KMP. He built the Driver and Fleet design-components library, migrated View-based screens to Compose, and worked on KMP.

smallcase

2020 – 2023

Investing platform, India. Curated portfolios of stocks and ETFs.

SDE 1 to SDE 2 to Senior Software Engineer

Tickertape. Native Android and native iOS first, then Flutter.

By his own account he led the team of seven that launched the Flutter iOS app, migrated Android to Flutter, and set up the Flutter architecture.

Cleartrip

2019 – 2020

Travel booking, India. Flights, hotels, trains.

Android Intern

The Cleartrip Android app, over 10 million downloads. He worked on the hotel-booking feature.

TheGeekDogs

2020 – now

This studio.

Pocket Manager.

4.3 stars, 1,000+ installs, still shipping.

One more thing worth noticing about the list above: travel bookings, then investing, then wealth, with fleet telematics the one exception. Three of the four put him next to other people's money, which is not a place anyone lands by accident.

He writes it down

Sahib writes Android posts regularly and they land: [channelFlow versus callbackFlow](#), [Android 16 dropping orientation locks and the duplicate-fragment bug it caused](#), [ViewModel versus onSaveInstanceState versus SavedStateHandle](#), and [why coroutine cancellation is cooperative](#). The Android 16 post drew 283 reactions

and 13 reposts on LinkedIn. Before any of that he founded PyHour at Chitkara, a student initiative running free Python classes for juniors.

Someone who can explain a thing clearly to strangers is usually the person who can explain it to a reviewer.

Background

BE, Chitkara University, 2016 to 2020.

Google Associate Android Developer certification, 2019.

Udacity Android Nanodegree.

Udacity iOS Nanodegree.

Google and Udacity Challenge Scholarship, phases 1 and 2. Top 1,000 of 10,000.

Recommendations from a mobile lead at smallcase and from a Google Developer Expert.

TheGeekDogs. A two-person mobile studio.

Bengaluru. We work in IST.
