

Tanya Jain

Mobile engineer. Native Android and KMP, and the iOS side too.

Software Engineer 2 at Motive, on the Fleet App, where she owns releases: phased rollouts, crash and ANR monitoring, and the fixes that follow. Here she owns QA on real devices and the security and privacy review outright, and shares code review with Sahib. She also owns the spec that starts the work and the ASO that ships it.

Underneath that is the shape she works on: a shared core, native code at the edges, and the developer practices that keep the two from drifting apart.

jaintanya999@gmail.com

always looking for ways to improve developer productivity, whether by refining workflows or introducing better development practices

go-to person for KMP-related discussions

Sahib Singh, who worked alongside her at Motive.

On a studio whose entire argument is that review gates catch what agents miss, that is the argument. It isn't a supporting role.

Shared core

How the work gets made

A shared core is a decision about what everyone has to agree on: the data, the rules, the review gate, the order the work moves in. The platform code at the edges stays small because the core settled it first.

Motive

Fleet management, US.

Software Engineer 2

Motive Fleet App. Kotlin, Coroutines, Compose, and KMP business-logic modules under Clean Architecture.

Bluetooth device-verification flows, CI/CD and workflow automation.

She owns app releases there: phased rollouts, crash and ANR monitoring, and the fixes that follow.

By her account, a 99.8% crash-free rate held and about 20% off startup time, from cold-start and dependency work.

2024 – now

Three of the four gates on the home page have her on them, two of them hers alone. She writes the spec that says what the thing deliberately won't do, she runs the build on physical phones, and she reads what it collects and what the listing says about it before anyone outside sees either. At Motive she owns releases the same way: phased rollouts, crash and ANR monitoring, and CI/CD work so the path from merge to store is one a person can repeat. A studio selling "agents write it, humans review it" needs someone whose subject that already is, and the shared core is the same argument one layer down: agree the data, the rules and the order of the work once, and the platform code at the edges stays small enough to review.

Owns

Spec, code and design review, device QA, security and privacy, ASO, release cut.

Android

HSBC

Global bank.

Software Engineer

Mobile banking. Migration to MVVM, UI performance work, and diagnosis of production issues.

2021 – 2023

Naskay Technologies

Mobile and product studio, Noida. Around 20 people, client work.

Android Intern

Kotlin, Glide, Retrofit. A UI rebuild, APK size cut through code and resource work, and refactoring.

The Jillian Michaels fitness app, built at Naskay for a US client.

2020 – 2021

The four gates on the home page are this layout applied to a build: one core everyone agrees on, and edges small enough to review.

Background

BTech, Computer Science and Engineering. Meerut Institute of Engineering and Technology, affiliated to Dr. A.P.J. Abdul Kalam Technical University, Lucknow. 2017 to 2021.

Udacity Android Developer Nanodegree.

HackerRank Java problem solving.

TCS CodeVita Season 9 pre-qualifier, all-India rank 2023.

Task Manager, an open-source multi-module Android app: github.com/Tanya-jain99/TaskManager.

TheGeekDogs. A two-person mobile studio.

Bengaluru. We work in IST.
